For Immediate Release

***dbi*STAFF-SCHEDULER *the* SOURCE CODE SOLUTION - Released**

Employee / Resource scheduling made easier than pen on paper

Winnipeg/Manitoba, October 5, 2004 - DBI Technologies Inc., the world leader in scheduling software, announces the release of *dbi*Staff-Scheduler *the* Source Code Solution. Based on its popular commercial, end-user software product *dbi*Staff-Scheduler, DBI proudly announces the immediate commercial availability of the Source Code version. Designed on the principle of "easier than pen on paper" *dbi*Staff-Scheduler *the* Source Code Solution provides developers a great opportunity to fast track development of a scheduling system. The *dbi*Staff-Scheduler Source Code product guides the developer through a clear understanding of design, buy versus build implementation of DBI's own commercial developer components and complete data model allowing developers a quick assimilation of the product into their own projects. "This new product will be extremely useful for Application Developers looking to jump start their scheduling project development. The value we're providing in the source code far out weighs the minimal up-front cost just in developer time alone" said Alan Shead President of DBI Technologies Inc.

An important step in advancing a developer's timeline, *dbi*Staff-Scheduler *the* Source Code Solution comes with a fully functioning database, built-in reporting and market differentiating functionality that includes Resource Planning views, drag and drop scheduling, and labour costing. "The one feature that really sets *dbi*Staff-Scheduler apart said Jeff Hands, President of Tracrite Software, is the ability of the software to track, in real-time, labour costs or as we prefer to call it, labour burden." This one feature alone, allows organizations to quickly track cost savings and ROI that truly impacts the bottom line.

Scheduling is not an easy paradigm to program especially when three and four different dimensions and up to 32,000 resources are schedule requirements. When considering these factors the development task becomes that much more of a challenge. *dbi*Staff-Scheduler *the* Source Code Solution certainly proves its weight in gold giving developers a incredible jump start. "It's like no other scheduling software available today and how can you go wrong with the value that DBI is providing," said John Lewis, President of DaProSystems, Inc. a public safety solutions provider.

Since the launch of DBI's first commercial scheduling component product in 1996 it has received numerous requests each and every year for more in-depth scheduling solutions and requests to assist in the programming of customers' projects. DBI has listened, analyzed and compiled the requests into a commercial, common base from which customers can now build-upon and enhance

to their own unique needs.

DBI has made scheduling virtually a headache free proposition with its suite of product offerings.

dbiStaff-Scheduler the Source Code Solution is available now.
